Working in Retirement: What You Need to Know

Planning on working during retirement? If so, you're not alone. Recent studies have consistently shown that a majority of retirees plan to work at least some period of time during their retirement years. Here are some points to consider.

Why work during retirement?

Obviously, if you work during retirement, you'll be earning money and relying less on your retirement savings, leaving more to grow for the future. You may also have access to affordable health care, as more and more employers offer this important benefit to part-time employees.

But there are also non-economic reasons for working during retirement. Many retirees work for personal fulfillment, to stay mentally and physically active, to enjoy the social benefits of working, and to try their hand at something new.

What about my Social Security benefit?

Working may enable you to postpone claiming Social Security until a later date. In general, the later you begin receiving benefit payments, the greater your benefit will be. Whether delaying the start of Social Security benefits is the right decision for you depends on your personal circumstances.

One factor to consider is whether you want to continue working after you start receiving Social Security retirement benefits, because your earnings may affect the amount of your benefit payment.

If you've reached full retirement age (66 to 67, depending on when you were born), you don't need to worry about this — you can earn as much as you want without affecting your Social Security benefit. But if you haven't yet reached full retirement age, $1 in benefits will be withheld for every $2 you earn over the annual earnings limit ($16,920 in 2017). A higher earnings limit applies in the year you reach full retirement age. If you earn more than this higher limit ($44,880 in 2017), $1 in benefits will be withheld for every $3 you earn over that amount, until the month you reach full retirement age — then you'll get your full benefit no matter how much you earn. Yet another special rule applies in your first year of Social Security retirement — you'll get your full benefit for any month you earn less than one-twelfth of the annual earnings limit ($1,410 in 2017) and you don't perform substantial services in self-employment.

Not all income reduces your Social Security benefit. In general, Social Security only takes into account wages you've earned as an employee, net earnings from self-employment, and other types of work-related income such as bonuses, commissions, and fees. Pensions, annuities, IRA payments, and investment income won't reduce your benefit.

Even if some of your benefits are withheld prior to your full retirement age, you'll generally receive a higher monthly benefit starting at your full retirement age, because the Social Security Administration (SSA) will recalculate your benefit and give you credit for amounts that were withheld. If you continue to work, any new earnings may also increase your monthly benefit. The SSA reviews your earnings record every year to see if you had additional earnings that would increase your benefit.

One last important point to consider. In general, your Social Security benefit won't be subject to federal income tax if that's the only income you receive during the year. But if you work during retirement (or you receive any other taxable income or tax-exempt interest), a portion of your benefit may become taxable. IRS Publication 915 has a worksheet that can help you determine whether any part of your Social Security benefit is subject to income tax.

How will working affect my pension?

Some employers have adopted "phased retirement" programs that allow you to ease into retirement by working fewer hours, while also allowing you to receive all or part of your pension benefit. However, other employers require that you fully retire before you can receive your pension. And some plans even require that your pension benefit be suspended if you retire and then return to work for the same employer, even part-time. Check with your plan administrator.

Managing Debt While Saving for Retirement

It's a catch-22: You feel that you should focus on paying down debt, but you also want to save for retirement. It may be comforting to know you're not alone.

According to an Employee Benefit Research Institute survey, 18% of today's workers describe their debt level as a major problem, while 41% say it's a minor problem. And workers who say that debt is a problem are also more likely to feel stressed about their retirement savings prospects.[1] Perhaps it's no surprise, then, that the largest proportion (21%) of those who have taken a loan from their employer-sponsored retirement plans have done so to pay off debt.[2] Borrowing from your plan can have negative consequences on your retirement preparedness down the road. Loan limits and other restrictions generally apply as well.

The key in managing both debt repayment and retirement savings is to understand a few basic financial concepts that will help you develop a strategy to tackle both.

Compare potential rate of return with interest rate on debt

Probably the most common way to decide whether to pay off debt or to make investments is to consider whether you could earn a higher rate of return (after accounting for taxes) on your investments than the interest rate you pay on the debt. For example, say you have a credit card with a $10,000 balance that carries an interest rate of 18%. By paying off that balance, you're effectively getting an 18% return on your money. That means your investments would generally need to earn a consistent, after-tax return greater than 18% to make saving for retirement preferable to paying off that debt. That's a tall order for even the most savvy professional investors.

And bear in mind that all investing involves risk; investment returns are anything but guaranteed. In general, the higher the rate of return, the greater the risk. If you make investments rather than pay off debt and your investments incur losses, you may still have debts to pay, but you won't have had the benefit of any gains. By contrast, the return that comes from eliminating high-interest-rate debt is a sure thing.

Are you eligible for an employer match?

If you have the opportunity to save for retirement via an employer-sponsored plan that matches a portion of your contributions, the debt-versus-savings decision can become even more complicated.

Let's say your company matches 50% of your contributions up to 6% of your salary. This means you're essentially earning a 50% return on that portion of your retirement account contributions. That's why it may make sense to save at least enough to get any employer match before focusing on debt.

And don't forget the potential tax benefits of retirement plan contributions. If you contribute pre-tax dollars to your plan account, you're immediately deferring anywhere from 10% to 39.6% in taxes, depending on your federal tax rate. If you're making after-tax Roth contributions, you're creating a source of tax-free retirement income.[3]

Consider the types of debt

Your decision can also be influenced by the type of debt you have. For example, if you itemize deductions on your federal tax return, the interest you pay on a mortgage is generally deductible — so even if you could pay off your mortgage, you may not want to. Let's say you're paying 6% on your mortgage and 18% on your credit card debt, and your employer matches 50% of your retirement account contributions. You might consider directing some of your available resources to paying off the credit card debt and some toward your retirement account in order to get the full company match, while continuing to pay the mortgage to receive the tax deduction for the interest.

Other considerations

There's another good reason to explore ways to address both debt repayment and retirement savings at once. Time is your best ally when saving for retirement. If you say to yourself, "I'll wait to start saving until my debts are completely paid off," you run the risk that you'll never get to that point, because your good intentions about paying off your debt may falter. Postponing saving also reduces the number of years you have left to save for retirement.

It might also be easier to address both goals if you can cut your interest payments by refinancing debt. For example, you might be able to consolidate multiple credit card payments by rolling them over to a new credit card or a debt consolidation loan that has a lower interest rate.

Bear in mind that even if you decide to focus on retirement savings, you should make sure that you're able to make at least the minimum monthly payments on your debt. Failure to do so can result in penalties and increased interest rates, which would defeat the overall purpose of your debt repayment/retirement savings strategy.

[3] Distributions from pre-tax accounts will be taxed at ordinary income tax rates. Early distributions from pre-tax accounts and nonqualified distributions of earnings from Roth accounts will be subject to ordinary income taxes and a 10% penalty tax, unless an exception applies. Employer contributions will always be placed in a pre-tax account, regardless of whether they match pre-tax or Roth employee contributions.

Examining the Taxpaying Population: Where Do You Fit In?

Every quarter, the Statistics of Income Division of the Internal Revenue Service (IRS) publishes financial statistics obtained from tax and information returns that have been filed with the federal government. Recently published reports reflect data gleaned from 2014 individual federal income tax returns. These reports offer a snapshot of how the U.S. population breaks down as taxpayers.

The big picture

For tax year 2014, U.S. taxpayers filed roughly 139.6 million individual income tax returns.[1] Total adjusted gross income reported on these tax returns was $9.71 trillion, resulting in a total income tax of $1.37 trillion. That works out to an overall average tax rate of 14.16% for all returns filed — the highest total average rate in the 10-year period represented by the statistical report.

If your 2014 AGI was $38,173 or more, you were in the top 50% of all federal income tax filers based on AGI. This group accounted for 88.7% of all AGI reported and paid 97.3% of total federal income tax for the year.

A look at the top

How much AGI did it take to make the top 10% of all individual filers? Probably not as much as you might think. If your AGI was $133,445 or greater, you would have been one of the almost 14 million filers making up the top 10%. This group reported about $4.58 trillion in AGI (more than 47% of all AGI reported) and accounted for about 70.9% of total individual income tax for the year.

To make the top 5%, you would have needed $188,996 or more in AGI. You would have been among approximately 7 million filers who reported almost $3.5 trillion in total AGI and accounted for about 60% of total income taxes paid.

It's also worth noting that the top 3% of all 2014 individual income tax returns based on AGI accounted for 52.9% of total income tax paid for the year.

The very, very top

For the 2014 tax year, 1.4 million returns had an AGI of $465,626 or more. These taxpayers make up the top 1% of filers, reporting almost $2 trillion in total AGI and responsible for just under a 40% share of the total tax haul.

The 1,396 income tax returns that showed $56,981,718 or more in AGI make up the top 0.001% (that's the top one-thousandth of 1%) of 2014 filers. These filers together reported over $207 billion in AGI and paid over 3.6% of taxes.

Not all high-income returns showed tax

Of the 6.2 million income tax returns filed for 2014 with an AGI of $200,000 or more, 10,905 showed no U.S. income tax liability (the number drops to 3,927 if you eliminate returns filed by individuals who were responsible for income taxes to foreign governments and had no U.S. income tax because of a credit for such taxes paid).

Why did these high-income returns show no U.S. tax liability? The IRS report noted that these returns show no tax for a variety of reasons, including tax credits and deductions, most notably miscellaneous deductions and deductions for charitable contributions, medical and dental expenses, and investment interest expenses. A significant secondary factor was the deduction for taxes paid.

Average tax rates

Dividing total tax paid by total AGI yields the following average federal income tax rates for the 2014 tax year:

Top Filers (by Percentile)	AGI Threshold	Average Tax Rate
0.001%	$56,981,718	24.01%
0.01%	$11,407,987	25.92%
0.1%	$2,136,762	27.67%
1%	$465,626	27.16%
5%	$188,996	23.61%
10%	$133,445	21.25%
20%	$90,606	18.64%
30%	$66,868	17.19%
40%	$50,083	16.24%
50%	$38,173	15.52%

[1] Excludes returns filed by dependents; based on final estimates for tax year 2014 reported in Spring 2017 Statistics of Income Bulletin

Sources for data: IRS Statistics of Income Bulletins, Spring 2017 and Summer 2017, Washington, D.C., irs.gov/statistics

What is adjusted gross income (AGI)?

Adjusted gross income, or AGI, is basically total income less adjustments for certain items, such as deductible contributions made to an IRA, alimony paid, and qualified student loan interest paid.

Is the Social Security Administration still mailing Social Security Statements?

Your Social Security Statement provides important information about your Social Security record and future benefits. For several years, the Social Security Administration (SSA) mailed these statements every five years to people starting at age 25, but due to budgetary concerns, the SSA has stopped mailing Social Security Statements to individuals under age 60.

Workers age 60 and over who aren't receiving Social Security benefits will still receive paper statements in the mail, unless they opt to sign up for online statements instead. If you're age 60 or older, you should receive your statement every year, about three months before your birthday. The SSA will mail statements upon request to individuals under age 60.

However, the quickest way to get a copy of your Social Security Statement is to sign up for a *my* Social Security account at the SSA website, ssa.gov. Once you've signed up, you'll have immediate access to your statement, which you can view, download, or print. Statement information generally includes a projection of your retirement benefits at age 62, at full retirement age (66 to 67), and at age 70; projections of disability and survivor benefits; a detailed record of your earnings; and other information about the Social Security program.

The SSA has recently begun using a two-step identification method to help protect *my* Social Security accounts from unauthorized use and potential identity fraud. If you've never registered for an online account or haven't attempted to log in to yours since this change, you will be prompted to add either your cell phone or email address as a second identification method. Every time you enter your account username and password, you will then be prompted to request a unique security code via the identification method you've chosen, and you need to enter that code to complete the log-in process.

How do the economic milestones of young adults today compare with prior generations?

If you're the parent of a young adult who is still living at home, you might be wondering whether this situation is commonplace. According to a recent U.S. Census Bureau study, it is: One in three young people (ages 18 to 34) lived in their parents' home in 2015.

The Census Bureau study examines how the economic and demographic characteristics of young adults have changed from 1975 to 2016. In 1975, for example, less than one-fourth of young adults (ages 25 to 34) had a college degree. Young adults in 2016 are better educated — more than one-third hold a college degree (or higher) — but student loan debt has made it more difficult for them to obtain financial stability, let alone establish homes of their own in their 20s.

More young adults in 2016 had full-time jobs than their counterparts did in 1975. In particular, young women ages 25 to 34 are experiencing economic gains, with more than two-thirds in the workforce compared with less than half in 1975. Young women today are also earning more money than they did in 1975 — their median incomes have grown from nearly $23,000 in 1975 to more than $29,000 in 2016 (in 2015 dollars).

Despite the educational and economic advances that young adults have made over the last 40 years, many are postponing traditional adult milestones. In fact, a majority of young adults are not living independently of their parents. Of the 8.4 million 25- to 34-year-olds still living at home, one in four are not attending school or working. It's important to note, though, that this could be because they are caring for a family member or have health issues or a disability.

Compared to 40 years ago, the timing and accomplishment of milestones on the path to adulthood are much more diverse and complex today. To view the full report, visit census.gov.
